

## KEEPS BUILDINGS DRY AND FREE FROM PENETRATING DAMP

Climashield® Masonry Protection Cream is a high quality brick waterproofing cream that, once applied, ensures long-lasting water repellency to walls. It will also help to protect against efflorescence, mould, algae and frost, as well as damage caused by pollutants.

Furthermore, the thermal efficiency of brick walls will start to reduce quite rapidly and valuable heat can quickly be lost by heat transference from inside to out. Climashield® Masonry Protection Cream will prevent rain penetrating into brickwork or masonry and is proven to reduce heat loss by up to 10% after one application. This improved thermal performance is created by reducing the amount of heat lost through "wet" walls after being treated with Climashield® Masonry Protection Cream.

## SUITABLE FOR ALL TYPES OF PROPERTIES OLD OR NEW

Climashield® Masonry Cream is suitable for use on unpainted masonry, brickwork, natural stone, concrete and limestone walls in the residential and commercial sector. It is also frequently used on new build homes by homeowners looking to protect their investment.

### KEY FEATURES:

#### Weather Resistant

Protects masonry, brickwork and natural stone against surface erosion, especially in coastal areas.

#### Moss & Algae Resistant

Inhibits the growth of mould and fungi on walls to keep them clean and looking like new, reducing ongoing maintenance costs.

#### Saves Energy and Money

Insulates and lowers heating bills.

#### Professional Application

By Registered Contractors.

#### 25 Year Lasting Protection

For long-term peace of mind.

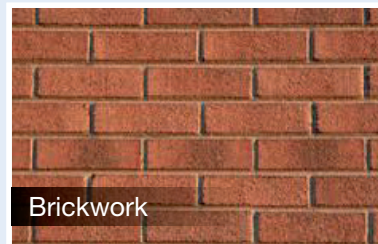

#### Environmentally Friendly

Climashield® is non-toxic, VOC free and safe to use.

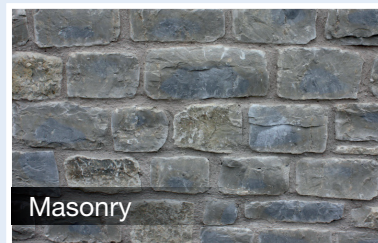

## LONG-LASTING PROTECTION FOR BRICKWORK, MASONRY AND NATURAL STONE

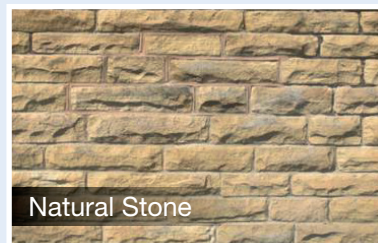

Climashield® Masonry Protection Cream is ideal for all property types where retaining the exterior look is of high importance, such as listed and historical buildings and homes in conservation areas.

Brickwork

Masonry

Natural Stone

*"I sealed a customer's house 100 yards from the sea that suffered from damp and leaks in heavy rain. Now he is delighted and no longer has damp even after recent storms."*
