

# TARMAC RESTORER

Makes older tarmac surfaces look like new

**Easy to apply protective coating for tarmac and asphalt surfaces**

**Tarmaseal® is a high quality restoration product for tarmac and asphalt surfaces. Easily applied by roller, Tarmaseal® will transform the surface by replacing lost resins and restoring the original colour of the tarmac.**

## TRANSFORMS... RESTORES... PROTECTS!!!

Tarmaseal® is an advanced, hard wearing and long-lasting acrylic coating for Tarmac or asphalt surfaces. Tarmaseal® can transform the look of driveways and car parks that have lost colour, look worn and 'tired'.

Tarmaseal® was originally formulated for use with commercial applications in mind, but is now available as an easy to apply DIY product for homeowners as well. It's important to understand that Tarmaseal® is very different from the cheap bitumen based paints often found in DIY stores. Tarmaseal® is a high quality water based acrylic tarmac restorer that will transform the surface of old tarmac by restoring the original colour and provide lasting protection for years to come.

### Benefits of Tarmac Resorer:

#### UNTREATED

- ❑ Cracking
- ❑ Loss of Colour
- ❑ 'Fretting' of stones
- ❑ Unsightly Stains / Algae
- ❑ Edges Breaking
- ❑ Pot Holes

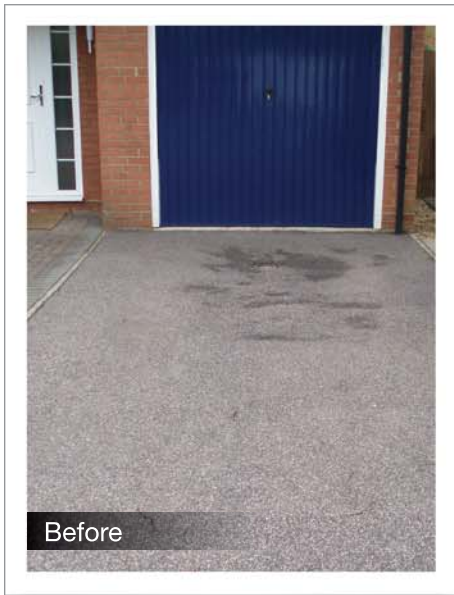

#### TREATED

- ✓ Replaces lost Resin
- ✓ Resistant to Stains and Water
- ✓ Restores lost Colour
- ✓ Increases Lifespan
- ✓ Covers Stains and Spillages

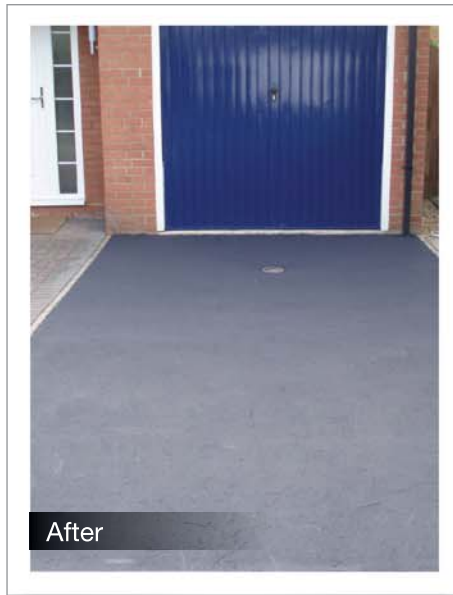

Increases durability of Tarmac making it last longer, saving money by avoiding costly replacement of new surfaces

## HOW TARMASEAL® WORKS

Tarmac and asphalt surfaces are very vulnerable to the damaging effects of direct sunlight. Over time, the surface colour of the tarmac will fade and the surface aggregate will start to come loose after prolonged exposure to UV rays from the sun. If left to deteriorate further, the tarmac or asphalt will eventually start to crack and eventually the whole tarmac driveway or car park might have to be replaced.

Tarmaseal® is far more than a tarmac paint. It contains the acrylic resins which your driveway had when new, but has lost over time. It will restore the original colouring of your tarmac and help to reduce 'fretting' (surface degradation). Tarmaseal® is specially formulated with UV filters that protect the newly coated tarmac from the damaging effects of sunlight.

One of the key differences between Tarmaseal® and a tarmac paint is that Tarmaseal® soaks into the tarmac, whereas paint tends to sit on the surface and can peel off with weathering and constant use by vehicles.

## KEY FEATURES:

### Hard Wearing

Helps to stop surface degradation or 'fretting'.

### Professional Application

Available from Registered Contractors

### Moss & Algae Resistant

Inhibits the growth and spread of moss and algae

### Stain Resistant

Easier to remove oil leaks and grease stains

### Saves Money

By reducing ongoing maintenance costs

### Environmentally Friendly

Water based, non-toxic and VOC free

*"Did a great job of restoring my tarmac, very happy with the end result"*
